Our most powerful engine yet

Where dreams are fulfilled, adventures are experienced and paradise is found. Our most powerful engine yet, Volvo Penta D13-IPS1350, unlocks all sorts of possibilities. When perfectly matched with the IPS pod, it increases your boat's cruising range by up to 40% compared to inboard shafts – great news for yacht owners, skippers, boat designers and builders. And that's just one of a thousand reasons to install a twin, triple or quadruple installation on your yacht.

1000 HORSEPOWER. FOR 1000 REASONS.

Reason #3

40% longer cruising range. With the D13 in a twin IPS installation, you increase your yacht's cruising range by up to 40%, compared to a yacht with inboard shaft propulsion.

Reason #533

Freedom for the designer. The high power-to-weight ratio of the propulsion package opens up for new cabin layout possibilities. Space for all the watersport gear. An extra sleeping cabin. A larger lounge. A workout area. A bar. The list goes on and on ...

Reason #867

Any yacht, any type, any size. The Volvo Penta D13 is a natural choice for demanding builders of yachts in the 60-120 feet span. In Twin, Triple or Quad IPS installations the power outputs are well beyond the rated figures.
